

VelvetCARE

PRODUCT CATALOGUE

We all can witness that natural **Earth resources are being depleted** at an alarming rate. At Velvet Care, **we do not accept this state of affairs** so we make many efforts to counteract this phenomenon.

We have started from ourselves. In the first instance, we have set tasks **for our own organization**, hoping that **others could get inspired** and change. We take actions **at a local scale** thus contributing to care about the environment **in macroscale**.

The goals and initiatives leading to their achievement are called **Eco Agenda Velvet Care**. Scheduled for the forthcoming years, it is **a map of our ambitions**, defines the time and content-related **framework for actions** we take for **sustainable development**.

At the threshold of the 21st century, it all depends on us. At Velvet Care, we are convinced that **we are the change!**

We believe that in order to **maintain the leadership position**, develop the company and meet the needs of millions of consumers who choose our brands every day, we must not only **offer the best products** but also **set an example by protecting the place we all call home**.

CARE FOR EVERYDAY LIFE WITH TOMORROW IN MIND

PROTECTION OF FOREST RESOURCES

In the Velvet factory, cellulose is used to produce tissue paper (from which the final products are made, i.e. toilet paper and handkerchiefs). The raw material used in the production processes comes from fully renewable forest resources having the international FSC® and PEFC™ responsible and sustainable forest management certificates. This means that Velvet only uses cellulose from certified and controlled sources.

Look for Velvet CARE certified products bearing the FSC® (FSC-C119667) or PEFC™ (PEFC / 32-31-086) logo in the offer.

RECYCLING

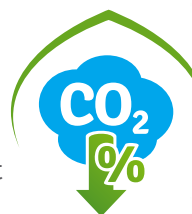

Velvet CARE uses raw materials that are mostly recyclable. It is planned to introduce foil packaging containing recycled materials in the near future.

Velvet product packaging and waste from used products should be sorted in accordance with the applicable segregation rules.

REDUCTION OF EXHAUST EMISSIONS

The emission of harmful gases generated by boiler houses was significantly reduced from 2013, i.e. from the very beginning of Velvet CARE, to the end of 2019.

Velvet CARE tries to limit transports from long-distance locations so as not to generate unnecessary emissions of exhaust gases and greenhouse gases to the environment. Since its establishment, the company has been importing cellulose mainly from Europe. This is the main raw material used in our factory.

www.savenature.info

REDUCTION OF PLASTICS USED

Since the company's market debut at the beginning of 2020, when the ECO Agenda 2025 was announced, the amount of plastic used in production has been reduced by 17%.

At Velvet CARE, we are constantly working to reduce its use by another 20% in the coming years.

WATER CONSERVATION IN THE PRODUCTION PROCESS

The Velvet CARE factory is proud of its modern machinery park, which is constantly being improved with the natural environment and surroundings in mind.

In 2018, a new paper machine operating in almost closed circuit was installed. The efficiency of water purification processes is also constantly increased.

In 2013-2019, the consumption of fresh water in production processes was reduced by more than 40%. There are plans to further reduce the volume of water used by continuously improving its treatment.

TOILET PAPER

➤ Long rolls - comfort and ecology

- ✓ White
- ✓ 100% cellulose
- ✓ PZH certificate

• Soft and gentle

• Super long

Ecological
solution
for everyone

- Economical, long-lasting roll
- Space-saving storage
- Economical transport: more paper in the truck means less CO₂ emissions
- Less plastic in the unit packaging
- More paper in a smaller package
- Recyclable packaging

• 4 rolls = 8 rolls
5901478007780

- Chamomile scent
