

VelvetCARE

PRODUCT CATALOGUE

With care for nature, for the benefit of you.

We are all witnessing the process that the **Earth's resources are being depleted** at an alarming rate. At Velvet Care **we do not agree with this state of affairs** and make many efforts to counteract this problem.

We do start from ourselves. We have set tasks **for our own organization**, hoping that others could get inspired and start making a change too. We take actions **at local scale** thus contributing to care about the environment **in macroscale**.

We developed the strategy called **Eco Agenda Velvet Care**. It consists of objectives and initiatives leading to their achievement with respect to the environment. Scheduled for the forthcoming years it is **a map of our ambitions** and goals with defined actions related to **sustainable development**.

At the threshold of the 21st century, it all depends on us. At Velvet Care, we are convinced that **we are the change!**

We believe that in order to **maintain the leadership position**, develop the company and meet the needs of millions of consumers who choose our brands every day, we must not only **offer the best products** but also **set an example by protecting the place we all call home**.

You can find the **save nature** mark on all Velvet brand products as proof of **Velvet CARE's** commitment to the environment.

PROTECTION OF FOREST RESOURCES

In the Velvet Care factory the tissue used for the production is 100% cellulose. The raw material used in production

processes comes from fully renewable forest resources having the international FSC® or PEFC™ certificates. This means that Velvet Care only uses cellulose from certified and controlled sources. Full list of Velvet Care certified products (FSC-C119667 and PEFC/32-31-086) you can find in our offer.

generate unnecessary greenhouse emissions to the environment. Since its establishment, the company has been importing cellulose mainly from Europe. This is the main raw material used in our factory.

REDUCTION OF PLASTIC USED

Since the company's market debut until the end of 2022, the share of plastic in raw material purchases has been reduced by as much as 45%. In line with its Eco Agenda 2025 sustainability strategy, Velvet CARE is constantly working to improve this result.

RECYCLING

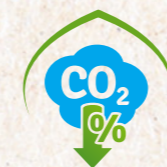

Velvet CARE uses raw materials that are mostly recyclable. The toilet paper packaging are made from 30% recycled materials called recyclete. Velvet product packaging and waste from used products should be sorted according with applicable segregation rules.

WATER EFFICIENCY IN THE PRODUCTION PROCESS

The Velvet CARE factory is proud of its modern machinery park, which is constantly being improved with the natural environment and surroundings in mind. In 2021, a new, third paper machine was installed, which meets the highest environmental and quality standards and uses water almost in a closed loop. The efficiency of purification processes is also constantly being increased. In 2013 - 2019, fresh water consumption per ton of tissue paper produced was reduced by more than 40%. Further processes to optimize its consumption and purification are carried out on an ongoing basis.

REDUCTION OF GREENHOUSE EMISSIONS

From the very beginning of Velvet Care operations in 2013 the company takes care of greenhouse gases emissions reduction. The important goal of our organization is to limit number of transports from long-distance locations not to

TOILET PAPER

➤ Discover 3-ply standard rolls that the whole family will love.
